Stratodesk software is the ideal solution for your LG Thin Clients. Take advantage of our simple pricing structure and easy deployment options.

NoTouch Desktop is the most advanced endpoint OS and management solution on the market.

NoTouch Desktop is Comprised of:

NoTouch OS: zero-attack surface, low footprint, hardware agnostic operating system that is ready to connect to your preferred environment directly out of the box.

NoTouch Center: the enterprise grade automated management solution for all of your endpoints.

EASY INSTALL OPTIONS

LOCAL BOOT

Allow your machine to boot from a USB stick or CD-ROM. Immediately after boot, at the boot menu, type in "install" to avoid Live Boot and instead go into the text-based installer.

PXE BOOT

Upload OS image. Then click on the "PXE" main menu item. Next, the screen will tell you what DHCP options you have to set in your network. NoTouch is ready once you make these modifications.

INSTALL

Once you have chosen your desired boot method, it's time to enter the installer. Make sure you type in "install" or select it with your cursor keys, depending on the menu that appears

Install Immediately or NoTouch Will Live Boot!

① You must install NoTouch imediately or else NoTouch will enter Live Boot Mode.

② Selecting or typing "install" opens the Stratodesk GENESIS Main Menu. You only have to pick the "Install NoTouch OS" option and hit ENTER to start the installation

③ You will be asked for a system serial number. The system will try to read the device identification or serial number from the system's DMI-BIOS. In case the system can not read a number from DMI-BIOS, please copy the asset tag or your inventory ID number.

Final Steps

The system will ask you if you really want to install NoTouch OS as doing so will wipe out your hard drive. Select OK and hit ENTER. This will return you to the GENESIS Main Menu. Next, move the selection down to Reboot and press ENTER.

The client will reboot and start up with NoTouch OS. Now you are finished and after the reboot you will see the NoTouch OS Configuration Wizard. Congrats! You are ready to enjoy NoTouch!
